

17th homework; JAVA, Academic year 2015./2016.; FER

I have uploaded today's presentation on Ferko – see `java_tecaj_14_prezentacija.pdf` in repository. Your homework assignment is on slide 42.

In order to upload the solution, you are required to prepare two separate files:

1. ZIP archive containing your complete project.
2. APK archive for your project which can be installed/deployed on mobile phone/emulator.

Here follows a correction of homework text from slide 42. Do not name the package as `jmbag.android.fer.hr`. Use `hr.fer.android.jmbag0000000000` instead, and replace `0000000000` with your actual JMBAG.

Minimal API level must be set to 21.

If you have any questions, please contact directly ana.baotic@infinum.hr (first group lecturer), kristijan.jurkovic@infinum.hr (second group lecturer) and/or ivan.markusi@infinum.hr (helped in both groups during lectures). Add me in cc:.

Please note. You can consult with your peers and exchange ideas about this homework *before* you start actual coding. Once you open you IDE and start coding, consultations with others (except with the lecturers from this week) will be regarded as cheating. You can not use any of preexisting code or libraries for this homework (whether it is yours old code or someones else).

Once you are done with homework, export the project as a ZIP archive. You will have to upload this ZIP file as well as the APK file (so two files in total). Upload both archives to Ferko before the deadline. **Do not forget to lock your upload** or upload will not be accepted. Deadline is Friday, July 7st 2016. at 08:00 AM.
